

Service Delivery at Meraki Health

www.merakishine.com

Meraki Health offers a variety of services. Among those are:

- Clinical Psychology
- Speech-Language Pathology
- Occupational Therapy
- Behavior Therapy
- Clinical Social Work
- Floortime Play Therapy
- Limitless Functional Education

Within these fields, the following are available:

- Diagnostic assessment
- Clinical Assessment
- Treatment
- Parent Coaching
- Sibling Support
- Consultation & Training

The frequency and methods in which we deliver these services are based upon the individual needs of the child and family. We partner with caregivers to create a program that will be most practical for their family while keeping in line with standards of best practice. The following options are available for service delivery in whatever combination works best for the child.

Limitless Therapeutic Day Program

Functional education in a group setting, with intermittent therapeutic interventions
8a-1p Monday-Friday with a calendar in line with local school districts.

Meraki Health Outpatient Services

Available after Limitless Hours for those seeking medically necessary evaluation and treatment of childhood developmental disorders.

Home-Based Services

Therapy provided in the child's home with an adult representative of the family on site.
This may be scheduled at any point in the day based upon the needs and staff availability.

Community Outings

Some of our older clients may require additional experiences within their community to prepare them for independent living. The need to practice life skills often takes us outside of the home. Arrangements can be made to take outings within the community regularly or occasionally.

Combination of the Above Service Delivery Options

A family may choose to combine the above offered services in order to meet the needs of their child and household. As the child's needs change, so can their plan of care. We encourage an open discussion about the needs of the family so that we can provide the best service possible.
